

Werner Maritz is a member of the Industry Strategy team at Oracle Construction and Engineering Global Business Unit with a specific focus on Public Sector and Infrastructure development programs. As a Certified Cost Professional, he has a passion for the digital transformation of the Project and Construction Management disciplines with a keen interest in the role BIM will play in this field to improve profitability, manage project risk and reduce construction cost.

Werner has more than 20 years of experience in project management and controls systems across Natural Resources, Infrastructure Development, Public Sector and Engineering & Construction industries. He has consulted extensively in public sector on the design and implementation of public infrastructure project management and monitoring solutions and work closely with development financing institutions to ensure adequate project governance systems are implemented for funded projects.
